

EKIMETRICS × ACTABLE

Strategic Acquisition Integration Report

Research Question

How can Ekimetrics integrate Actable in a way that maximizes strategic value creation (commercial, technological, and geographic synergies), while managing organizational, operational, and cultural integration risks?

PART I, Introduction & Strategic Framing

1. Introduction & Acquisition Overview

1.1 Context and Motivations Behind the Acquisition

The acquisition of Actable by Ekimetrics takes place during a period of significant change in the global data science consulting sector. With its Elevate strategic plan, Ekimetrics aims to become a global leader in large-scale AI deployment by 2028. The main objective of this transaction is to close the gap between strategic marketing measurement (MMM) and actionable, individual-level customer insights and activation.

1.2 Synthetic Presentation of Key Stakeholders

This strategic operation involves two highly complementary entities:

- **Ekimetrics:** A global data science consultancy (founded 2006, Paris) specializing in Marketing Mix Modeling (MMM) and P&L optimization for Global 500 companies.
- **Actable:** A U.S.-based specialist (founded 2019, New York) focusing on Customer Data Platforms (CDP) and predictive customer-level analytics such as churn and CLV modeling.

1.3 Scope of the Operation and Timeline

This acquisition marks a significant milestone for Ekimetrics, as it integrates Actable's full technology stack and specialized teams based in New York, Chicago, and key global locations. Announced in early 2026, the integration will proceed in phases, with the objective of achieving complete technical and operational alignment by 2028 in support of Ekimetrics' global strategic goals.

1.4 Structure of the Report

To evaluate this integration, the report is structured into eight distinct parts:

- **Diagnostic (Parts II–III):** Identifying capability gaps and analyzing power dynamics among key stakeholders. **Evaluation & Roadmap (Parts IV–V):** Defining optimal integration scenarios and a phased technology roadmap. **Frameworks & Outlook (Parts VI–VIII):** Establishing governance models, risk mitigation strategies, and projecting long-term strategic value.

2. Company Profiles & Strategic Positioning

2.1 Business Models & Capabilities

Understanding the acquisition of Actable by Ekimetrics first requires a clear-eyed comparison of the two firms' respective business models, service offerings, and core competencies. While both companies operate at the intersection of data science and marketing performance, they do so from fundamentally different vantage points, Ekimetrics from the macro lens of marketing mix and P&L optimization, Actable from the micro lens of individual customer intelligence and activation. Their complementarity is precisely what makes this deal strategically compelling.

The table below contrasts the two firms across the key dimensions of business model, capabilities, technology, and client relationship, revealing a pattern of high complementarity with limited direct overlap.

EKIMETRICS	ACTABLE
Founded 2006, Paris, France	Founded 2019, New York, USA
Model Tech-enabled managed services + platform licensing	Model High-touch advisory + implementation services
Core Expertise Marketing Mix Modeling (MMM), macro-level performance measurement, P&L optimization	Core Expertise Customer Data Platform (CDP), micro-level customer analytics, data activation
Technology One.Vision, proprietary MMM & decision platform	Technology Intelligence Factory, modular customer data & AI framework
Data Lens Aggregate / channel-level: How does marketing spend drive revenue?	Data Lens Individual / customer-level: Who are my most valuable customers and what drives their behavior?
Client Relationship Multi-year strategic partnerships with C-suite (CMO, CFO)	Client Relationship Project-based and retainer, primarily with marketing ops and data teams
Geography Global: Europe (HQ), North America, Asia	Geography US-centric, with emerging presence in Germany (Munich)
Scale 500+ employees, 200+ clients, 100+ countries	Scale Lean boutique team; US enterprise focus

Key Partners Google, Meta, Amazon, TikTok, Microsoft, Bpifrance, Tikehau Capital Analyst Recognition Forrester Leader (2026), Gartner Visionary (2024), MMM	Key Partners Google Cloud, Databricks, Snowflake ecosystem partners Analyst Recognition Recognized CDP and customer analytics specialist; Google Cloud & Databricks alliance partner
---	--

The most revealing insight from this side-by-side analysis is not where the two firms overlap, but where they connect. Ekimetrics answers the question: What is the aggregate ROI of my marketing investment. Actable answers the question: Which customers should I prioritize tomorrow, and through which channel? Together, they close what is perhaps the most persistent gap in enterprise marketing: the disconnect between top-down spend optimization and bottom-up customer-level execution.

Key takeaway: The Ekimetrics-Actable combination is not a redundancy play but a capability stack play. Each firm occupies a distinct and adjacent layer of the marketing intelligence value chain. The strategic question is therefore not whether synergies exist, they clearly do, but how quickly and at what cost they can be operationalized.

2.2 Market Position & Geographic Footprint

By assessing the competitive positioning of Ekimetrics and Actable, it is essential to understand the strategic logic of the acquisition. Although both companies operate in the broader data and AI consulting space, they hold distinct and highly complementary positions in their respective markets. Ekimetrics has built a strong reputation in Europe through its expertise in marketing effectiveness and advanced analytics, while Actable has developed specialized capabilities in customer analytics within the U.S. market. Their positioning is therefore complementary both geographically and across the marketing analytics value chain.

The table below contrasts the competitive positioning of both firms across six key dimensions, highlighting how their respective strengths combine to form a complete end-to-end marketing intelligence offer.

Dimension	Ekimetrics	Actable
Core Focus	Marketing performance optimization	Customer analytics & AI activation
Key Expertise	Marketing Mix Modeling (MMM), econometrics	Machine learning, predictive analytics, CDP
Analytics Level	Macro-level marketing strategy	Micro-level customer behavior

Technology	Econometric modeling, One.Vision platform	AI-driven Customer Data Platforms (CDP), Intelligence Factory
Geographic Strength	Strong European presence with global offices (Paris, London, New York, Shanghai, HK)	Strong presence in the United States (New York, Portland, Denver, Munich)
Strategic Contribution	Strategic marketing optimization & P&L measurement	Customer targeting, personalization & marketing activation

This comparison highlights the complementary positioning of the two companies within the marketing analytics value chain. While Ekimetrics focuses on strategic marketing optimization through econometric modeling and marketing mix analysis, Actable specializes in AI-driven customer analytics and activation. The integration of these capabilities enables the combined entity to link high-level marketing strategy with customer-level execution, an end-to-end proposition that neither firm could offer independently.

The geographic footprint of Ekimetrics and Actable reflects complementary regional strengths that reinforce the strategic logic of the acquisition. Ekimetrics originated in Europe and maintains a strong presence across major European markets while operating internationally with offices in North America and Asia-Pacific. This global consulting network allows the company to serve multinational clients across industries. Actable, by contrast, is primarily rooted in the United States, one of the world's most dynamic markets for AI, customer analytics, and digital marketing technologies.

By integrating Actable's U.S. presence with Ekimetrics' established international footprint, the combined entity strengthens its position across both European and North American growth zones, enabling broader access to global clients and expanding its analytics capabilities across markets.

Company	Core Geographic Strength	Key Office Locations
Ekimetrics	European leadership with global consulting expansion	Paris (HQ), London, New York, Shanghai, Hong Kong
Actable	U.S.-centric, with emerging European presence	New York (HQ), Portland, Denver, Munich

3. Strategic Rationale of the Acquisition

3.1 US Expansion Logic

The decision to acquire Actable cannot be evaluated solely as a capability play, it is equally a geographic bet of strategic necessity. This section examines the structural opportunity in the U.S. market and the specific logic by which Actable accelerates Ekimetrics' entry into it.

North America dominates global MarTech and data-driven marketing budgets, with spend growing in the mid-to-high teens annually, making it the primary concentration point for enterprise AI, analytics, and marketing technology investment worldwide. Two converging forces are sharpening demand in this market: the deprecation of third-party tracking infrastructure is forcing U.S. advertisers toward first-party data strategies and AI-driven decisioning, while enterprises increasingly seek partners who can both measure marketing effectiveness and activate insights in real time.

#1 Global MarTech market, North America leads by spend	~\$2B US MMM market size (2025), growing at 9% CAGR	84% CDP industry funding concentrated in the Americas	40%+ Global CDP market CAGR to 2028 (MarketsandMarkets)
--	---	---	---

Rather than spending years building brand recognition, hiring locally, and developing partner relationships in one of the world's most competitive consulting markets, Ekimetrics acquires a team, a client base, and an ecosystem position that are already trusted by U.S. marketing and data leaders. The time-to-scale advantage alone, estimated at five to seven years of equivalent organic development time (section 3.4), justifies the move.

Beyond speed, Actable fills a genuine capability gap. Its hands-on CDP deployment and activation expertise provides the 'last mile' execution layer that U.S. enterprise clients expect, and that Ekimetrics, strong in MMM, analytics, and AI design, did not yet have at scale in North America. This gap is not a minor omission; in the U.S. enterprise market, the ability to move from strategic insight to operational activation is frequently the deciding factor in platform selection and contract renewal.

Actable's existing partnerships within the U.S. CDP and cloud ecosystem, including its established alliances with Google Cloud, Databricks, and Snowflake, and its proximity to platforms such as Lytics, also mean Ekimetrics can plug its AI and analytics assets into live co-selling motions immediately, rather than earning that access from scratch. In the U.S. market, where partner ecosystem credibility is a key procurement signal, this is a meaningful and durable competitive advantage.

Strategic conclusion: The U.S. acquisition of Actable is best understood as Ekimetrics purchasing a proven market position, not just a set of capabilities. The team is in place, the client relationships are

established, and the ecosystem partnerships are active. What Ekimetrics now adds is scale, analytical depth, and global reach, transforming a strong US boutique into a globally-backed, full-stack marketing intelligence platform. The execution risk, detailed in sections 5.2 and 5.4, lies in preserving that position during the integration transition.

3.2 Capability Enhancement

The acquisition of Actable is a transformative milestone that enables Ekimetrics to pivot from Diagnostic Analytics to Operational Intelligence. By integrating Actable's expertise, Ekimetrics effectively closes the loop between strategic insight and tactical execution, a gap that has historically constrained the firm's ability to accompany clients from recommendation to measurable business impact.

Actable provides the essential infrastructure for execution that Ekimetrics has lacked. This fills a critical structural gap: transitioning from telling a client what happened, and what they should do, to orchestrating how to optimize performance in real-time, at the individual customer level. The combined entity can now accompany clients across the full intelligence-to-activation cycle, from strategic budget allocation down to personalized channel execution.

By integrating Actable's engineering-grade data management capabilities, Ekimetrics significantly enhances its capacity to process high-velocity first-party data. This transforms the combined value proposition from periodic strategic audits, conducted quarterly or annually, to an always-on growth engine, enabling continuous refinement of strategies based on actual, real-time customer behavior. Critically, Actable's data engineering expertise directly addresses a recurring bottleneck in MMM projects: the last mile of data ingestion. By streamlining and automating this process, the combined entity accelerates model refresh cycles and increases the commercial relevance of Ekimetrics' analytical outputs.

3.3 MMM + CDP + AI Convergence

The true strategic unlock of this deal lies not in the individual capabilities each firm brings, but in what emerges when they converge. The combination of Marketing Mix Modeling, Customer Data Platform infrastructure, and Ekimetrics' One.AI machine learning layer creates a proprietary ecosystem, a Unified Decision Brain, that neither entity could have built independently, and that is structurally difficult for competitors to replicate.

The integration of MMM with CDP capability creates a closed-loop intelligence system that operates simultaneously at two levels. At the macro level, MMM provides top-down strategic guardrails: it quantifies the incremental impact of media investments across channels, sets ROI-based budget allocation targets, and answers the CFO-level question of where to invest. At the micro level, the CDP provides

bottom-up operational fuel: it ingests high-definition first-party signals, models individual customer journeys, and answers the operational question of who to reach, when, and through which channel. Together, they form a system where strategic budget decisions are continuously informed by individual-level behavioral signals, and individual-level activation is continuously guided by macro-ROI targets.

Ekimetrics' One.AI layer serves as the connective tissue between these two planes. By applying machine learning to Actable's granular first-party data, One.AI feeds real-time micro-conversion signals back into the macro MMM model, tightening the feedback loop and enabling the model to update at a cadence previously impossible with periodic audit data alone. The result is a genuinely closed-loop system: strategic budget shifts are instantly informed by micro-conversion performance, and micro-targeting rules are continuously recalibrated against macro-ROI objectives. This represents a fundamental evolution in how marketing intelligence is delivered, from a sequence of discrete analyses to a continuously self-optimizing system. The three technology pillars each play a distinct and non-substitutable role in the integrated architecture:

3.4 Value Creation Thesis

The value this acquisition creates can be decomposed into four distinct, additive levers. Each is independently meaningful; together they define the strategic transformation this deal enables.

Actable is the most defensible target for three reasons: strategic non-overlap (adjacent but non-competing layers of the marketing stack, minimizing cannibalization); cultural compatibility (full team retained post-acquisition, shared data-science-first culture); and ecosystem leverage (Google Cloud, Databricks, and Snowflake partnerships additive to Ekimetrics' existing alliances with Google, Meta, Amazon, and TikTok). The thesis is compelling but conditional: value is realized only if Ekimetrics retains Actable's founding team (failure puts 60% of thesis value at risk), deploys a joint go-to-market proposition within 12 months, and maintains Actable client satisfaction above pre-acquisition baseline throughout the transition. Synergies are estimated at \$12M–\$33M in cumulative incremental revenue over three years under the base case. This range is derived from the cross-sell conversion assumptions detailed in Section 10: 10 to 15 client conversions at average Actable contract values of \$800K to \$2.2M. Full financial modeling is developed in Section 16.

PART II, Diagnostic & Integration Challenges

4. Integration Diagnostic

4.1 Capability Gaps Assessment

Understanding the capability gaps between Ekimetrics and Actable is key to recognizing how this acquisition enhances Ekimetrics' value proposition, moving from diagnostic analytics toward a fully integrated operational intelligence offer. Four structural gaps define the strategic necessity of the deal. First, while Ekimetrics excelled at macro-level measurement and P&L optimization, it lacked the 'last mile' ability to convert insights into real-time marketing actions; Actable fills this gap by turning analytical conclusions into executable campaign logic and personalization at scale. Second, Ekimetrics' macro lens on aggregate channel ROI left a gap in managing identity-resolved customer profiles; integrating Actable's CDP expertise now bridges top-down spend optimization with bottom-up customer-level execution.

The two remaining gaps are operational and technical. Ekimetrics' periodic strategic audit model struggled to meet enterprise demand for always-on intelligence; Actable's engineering-grade data management automates ingestion, a common MMM bottleneck, enabling continuous strategy refinement based on high-velocity behavioral data. Finally, despite strong partnerships with Meta and Google, Ekimetrics lacked deep integration within cloud data warehouses such as Databricks and Snowflake; Actable's established position within these ecosystems closes that technical gap, accelerating deployment and strengthening Ekimetrics' competitive positioning against US-native data consultancies. The table below maps each gap to its priority level, remediation timeline, and strategic objective, providing a structured basis for the integration roadmap developed in Chapter 11.

4.2 Organizational & Cultural Differences

Cultural and organizational differences represent one of the most underestimated sources of integration risk in professional services acquisitions. For Ekimetrics and Actable, the differences are real but not irreconcilable; they reflect two distinct but complementary professional identities rather than a fundamental values conflict. Ekimetrics embodies a French consulting mindset centered on rigor, structured problem-solving, and business-outcome-driven analytics, with long-cycle executive engagements built on econometric credibility and documented frameworks. Its 500+ person workforce reflects a strong European core, a relatively hierarchical formal governance, and highly collaborative project teams. Actable, by contrast, was built to solve operational problems quickly: lean, agile, and execution-oriented, with short iteration cycles, horizontal decision-making, and a team accustomed to spanning engineering, analytics, and client management simultaneously, all within fast-paced US MarTech environments.

Despite these differences, the integration baseline is favorable. A critical positive signal is that Actable's leadership has been explicitly retained and the team kept intact post-acquisition, indicating a deliberate soft-landing strategy. This continuity is the single most important factor in mitigating the cultural and talent risks detailed in section 5.3, and must be actively protected throughout the integration period rather than assumed. Understanding these differences clearly is a prerequisite for designing a model that preserves what is valuable in each firm while building the shared culture the combined entity will need to thrive.

4.3 Operational & Technical Compatibility

Operational and technical compatibility between Ekimetrics and Actable is, at its foundation, strong; both entities share a data-science-first culture, operate in overlapping technical ecosystems, and have built their platforms around AI and machine learning. The integration challenge is therefore not one of fundamental incompatibility, but of bridging two architecturally distinct systems built for different analytical purposes. Ekimetrics' model is centered on periodic strategic audits with long production cycles, while Actable provides always-on operational intelligence built for continuous data ingestion and real-time activation. The operational objective is to establish a unified delivery standard combining both, a hybrid model that neither firm currently offers independently at scale. Both firms already utilize integrated squads of data scientists, engineers, and business consultants, ensuring meaningful organizational compatibility; the primary challenge is cadence alignment, as Ekimetrics' longer project rhythms will need to accommodate Actable's faster iteration cycles.

On the technical side, the strategic goal is to embed Actable's predictive modules, including churn scoring, propensity modeling, and CLV, directly into the One.Vision interface, giving clients a single environment where macro-budgetary decisions connect to micro-level customer behavior outcomes. This single-source-of-truth architecture is the product vision that differentiates the combined platform from any existing competitor offering and anchors the joint go-to-market proposition developed in section 11.3. Underpinning this is a shared commitment to data integrity; both firms have independently invested in data lineage, quality controls, and auditability, facilitating the creation of a Trusted Data Chain across the combined platform that eliminates fragmented silos and addresses growing regulatory scrutiny (section 4.4).

4.4 Regulatory Considerations

The regulatory environment presents a dual compliance challenge: GDPR and EU data protection law govern Ekimetrics' European operations, while US data privacy regulations (including CCPA and sector-specific rules in financial services and healthcare) govern Actable's US client base. The integration must establish a unified data governance framework that satisfies both regimes simultaneously, particularly for cross-border data flows between One.Vision and the Intelligence Factory. Data Clean Room architecture,

deployed by Month 9, is the primary technical control: it enables collaborative analytics without transferring personally identifiable information across jurisdictions. A legal review of all cross-border data transfer protocols must be completed at close, and any active client contracts with data residency clauses must be flagged and managed before any platform integration begins.

5. Key Integration Risks

5.1 Strategic & Governance Risks

The primary strategic risk is that the integration fails to deliver on its core thesis: a unified platform connecting MMM and CDP. This can occur through two distinct failure modes. The first is over-integration, forcing Actable into Ekimetrics' European operating model too quickly, triggering the talent attrition that would remove the Intelligence Factory's technical depth. The second is under-integration, maintaining such loose governance that the two entities operate as independent silos, generating no cross-sell synergies and no platform convergence. The Hybrid Model is designed specifically to navigate between these two failure modes, but it requires active governance, a functioning JSC, and clear decision rights from Day 1 to do so. A secondary strategic risk is competitive: the window for Ekimetrics to establish a differentiated MMM plus CDP position in the US is not indefinite. Salesforce, Adobe, and emerging AI-native analytics vendors are all moving in the same direction. The integration timeline (joint GTM by Month 6, platform PoC by Month 9) is calibrated to capture this window before it closes.

5.2 Operational & Client Risks

Operational and client risks are the most time-sensitive in this integration: unlike governance or strategic risks, they can materialize within weeks of deal close. Actable is a high-touch boutique, its clients bought a specific team, working style, and set of relationships. Two structural features amplify the risk: the high personalization of Actable's client model, and the delivery model gap between the two firms (section 4.3), which creates confusion risk during transition.

Actable client defection: Key account contacts may perceive team changes or new reporting lines as a signal of shifting priorities, particularly in the first six months post-close where continuity is most fragile.

Ekimetrics client concern: European clients may interpret the US acquisition as a signal of strategic distraction or reduced attention to their accounts, risking early disengagement in months three to twelve.

Joint proposition confusion at renewal: Clients unsure whether to renew under the existing scope or wait for the integrated offering may delay decisions, creating revenue gaps between months six and eighteen.

Competitor poaching: Rival firms routinely time outreach campaigns to coincide with acquisition announcements, targeting both client and talent relationships during the transition window.

Integration is an absorbing organizational event: in the first 6 to 12 months, leadership bandwidth is typically consumed by internal coordination, creating a structural commercial gap, pipeline slows, renewals are deprioritized, and active RFP processes lose momentum. Three specific scenarios require tracking: delayed renewals (clients defer decisions pending clarity on the new entity's proposition); pursuit abandonment (commercial teams redeployed to integration workstreams); and post-announcement pipeline freeze (late-stage prospects pause engagement). This risk is elevated given Ekimetrics' status as a first-time acquirer, which typically lacks the commercial continuity infrastructure experienced acquirers maintain as insulated from integration work.

At the delivery level, the risk is quality degradation during cross-entity projects: teams reorganized across entities face coordination overhead, role ambiguity, and delivery model gaps (4.3) that can extend timelines and reduce output quality for clients. Data pipeline disruption, even temporary, during technical integration phases erodes confidence in both One.Vision and Intelligence Factory outputs.

5.3 Cultural & Talent Risks

The integration of Ekimetrics and Actable carries significant cultural and talent risks, particularly given the transatlantic dynamic and the merger of a larger structured consultancy with a smaller entrepreneurial specialist. These risks interact directly with the organizational differences mapped in section 4.2 and can undermine both integration speed and long-term value creation if not explicitly managed. The core tension runs in both directions: if Ekimetrics imposes overly centralized, Paris-led processes or reporting structures, Actable employees may feel their autonomy eroded, leading to quiet attrition before formal retention mechanisms activate; conversely, segments of Ekimetrics' teams may perceive Actable as too informal or too US-driven, reinforcing us-versus-them narratives that slow collaboration and knowledge sharing. Cultural dilution, left unaddressed, operates simultaneously in both directions, diminishing what was valuable in each firm rather than synthesizing the best of both.

The talent exposure is particularly acute on the Actable side. Data engineers, customer-data specialists, and MarTech implementation experts tend to be more sensitive to culture fit and autonomy than average consultants, and the US MarTech talent market is highly liquid; competitors actively monitor acquisition announcements as recruitment opportunities. If integration messaging focuses too heavily on harmonization rather than on opportunity, US growth, and global scale, top performers will seek alternatives rather than endure uncertainty. Ekimetrics also risks under-attracting US-native talent if its employer brand remains perceived as French consulting-first, limiting its ability to build a genuine US leadership bench over time. The talent retention strategy in section 12.4 addresses these risks directly.

PART III, Strategic Audit & Stakeholder Analysis

6. Client Portfolio & Revenue Synergy Assessment

6.1 Revenue Structure & Concentration

Ekimetrics and Actable present structurally distinct revenue profiles that, when read together, reveal the underlying logic of the acquisition.

Ekimetrics generates revenue primarily through multi-year managed service contracts with Global 500 clients, concentrated in CPG (30-35%), Financial Services (20-25%), Retail (15-20%), and Media (10-15%). This model provides high revenue predictability but reflects a European client base that is approaching maturity. Growth in the European MMM market has slowed considerably, with competitive pressure from both specialist boutiques and large consulting firms increasingly compressing margins and limiting new logo acquisition.

Actable operates in the US enterprise market with a leaner, higher-touch model. Its portfolio is concentrated in Retail/DTC (35-40%), Media and Streaming (20-25%), Financial Services (15-20%), and Tech/SaaS (10-15%). Crucially, Actable's US market is not mature: it is expanding. Enterprise demand for Customer Data Platforms is accelerating as organizations transition away from third-party cookies toward first-party data architectures, and Actable is well-positioned in this growth window.

This asymmetry reframes the acquisition thesis entirely. Ekimetrics is not entering the US from a position of weakness: its US revenue is already growing strongly. What the acquisition does is convert an organic growth trajectory into a structural market position, anchoring Ekimetrics in the US before competitors can consolidate the CDP-MMM convergence space. The deal is best understood as a deliberate geographic rebalancing from a maturing European base toward a high-growth US platform.

A critical risk applies to both firms: the top 5 clients represent an estimated 20 to 30% of revenue at each entity: a typical concentration ratio for boutique analytics firms at this scale, amplifying attrition exposure during the integration period. This risk is particularly acute on the Actable side, where fewer, higher-value accounts mean that a single client departure materially affects revenue figures.

6.2 Cross-Sell & Upside Opportunities

Direct portfolios overlap between Ekimetrics and Actable is minimal, eliminating near-term cannibalization risk and creating a clear cross-sell runway in both directions. The two firms serve complementary layers of the same enterprise marketing stack: Ekimetrics at strategic measurement, Actable at operational activation. They frequently serve different buyer personas within the same

organizations, requiring a deliberate account coordination model, but also enabling the combined firm to penetrate client organizations more deeply than either could alone.

Ekimetrics' 200+ global clients are actively transitioning from third-party cookie dependency to first-party data infrastructure. This transition is a regulatory and commercial inevitability. Actable's CDP capability represents a natural extension of the MMM engagement: once a client understands where their media spend is working at the macro level, the next logical step is building the infrastructure to act on that insight at the individual customer level. This upsell motion is strategically timed and client-demand driven, particularly in CPG, Retail/Subscription, and Financial Services.

Actable's US enterprise clients are sophisticated in customer-level analytics but systematically lack macro-level channel attribution. CMOs under CFO pressure to justify aggregate media spend cannot rely solely on individual-level behavioral data: they need the strategic measurement layer that MMM provides. Ekimetrics fills this gap directly, and the pitch is particularly compelling in Retail/DTC and regulated industries where budget accountability is high.

Five priority opportunities have been sized based on estimated addressable accounts per segment and average Actable contract values (\$800K to \$2.2M). These are internal estimates, not audited projections. **Actable CDP into Ekimetrics CPG accounts:** \$5M-\$15M, Medium feasibility. Condition: joint account team and CDP pitch within 6 months. **Actable CDP into Ekimetrics Retail/Subscription:** \$3M-\$8M, High feasibility. Condition: closed-loop MMM + CDP proposition at renewal. **Ekimetrics MMM into Actable Retail/DTC:** \$4M-\$10M, Medium feasibility. Condition: Actable teams trained on MMM value prop in 90 days. **Unified platform upsell (Media):** \$4M-\$10M, High feasibility. Condition: unified MMM + CDP + AI proposition live before Year 2. **New US logos via combined brand:** \$8M-\$20M, Medium feasibility. Condition: Ekimetrics US team expanded using Actable relationships.

6.3 Growth Potential

The three-year growth outlook must be read through the lens of a strategic geographic rebalancing, not simply a product expansion.

Ekimetrics' European MMM business is growing at a solid but moderating rate: a solid but moderating rate in a market where MMM adoption among large enterprises is already high and competitive differentiation is increasingly difficult to sustain. The European opportunity is not disappearing, but it is not the engine of future growth.

The US market presents a fundamentally different profile. Enterprise demand for integrated marketing measurement and activation is accelerating, driven by privacy regulation, cookie deprecation, and rising CFO scrutiny of marketing budgets. Critically, Ekimetrics' US revenue was already growing strongly prior

to this acquisition. Actable's post-acquisition growth is projected at 25%+ annually under Ekimetrics' brand, capital, and global client relationships. The combined addressable market for MMM, CDP, and AI convergence exceeds \$30 billion by 2028, with enterprise deal sizes expected to double under the combined proposition.

Optimistic. Joint GTM live in 6 months; tech convergence by Year 2. Full synergy ceiling of \$33M captured by Year 3. Condition: full team retained and unified platform live Year 2. **Base Case.** Joint GTM in 12 months; tech convergence by Year 3. \$12M-\$20M synergies captured by Year 3. Actable grows 20-25%; 5-8 new logos/year. Combined CAGR: 20-25%. Condition: key talent retained and cross-sell playbook deployed. **Pessimistic:** GTM delayed 18+ months; tech convergence beyond Year 3. Below \$10M synergies; significant leakage. Actable flat/declining; 2-3 new logos. Combined CAGR: 10-15%; acquisition premium not recovered. Condition: talent erosion and client attrition.

7. Stakeholder & Governance Mapping

7.1 Key Decision-Makers

Ekimetrics; strategic direction and the integration of Actable are steered by a reinforced governance framework established under the Elevate 2028 plan, with four dedicated committees translating vision into operational decisions that directly affect the integration and US growth trajectory.

TOP-LEVEL EKIMETRICS GOVERNANCE

Supervisory Board (Chair: Eric Labaye). Oversees overall strategic direction, including international expansion and the successful execution of Elevate, with a specific focus on scaling in key markets such as North America.

Jean-Baptiste Bouzige (President & CEO, co-founder). Ultimate sponsor of the Actable acquisition, responsible for the global vision and for arbitrating trade-offs between worldwide integration, local autonomy, and investment levels in the US.

FOUR STRATEGIC COMMITTEES UNDER ELEVATE 2028

Hypergrowth Committee: Owns M&A, geographic expansion, and topline growth; decides how aggressively to invest in US scaling and how Actable is positioned within Ekimetrics' global portfolio.

Operational Excellence Committee: Designs the target operating model, core processes, and integration approach across all countries, including anglophone markets where Ekimetrics is already present.

Differentiating Offer Committee: Defines and sequences the global offer, including how MMM, CDP, and AI capabilities are combined and rolled out in the US market.

Product & Tech Innovation Committee: Steers development of platforms, data, and AI assets, managing convergence with Actable’s tooling and martech stack, including the Intelligence Factory platform.

ACTABLE LEADERSHIP AND US POWER CENTER

Matt Greitzer (CEO): Leads all business functions and remains the primary voice of US strategy and client priorities. His personal credibility is central to talent retention: if he is seen as marginalized post-close, the signal to the broader Actable team will be immediate and damaging. He must receive a meaningful strategic role with genuine decision rights.

Craig Howard and Craig Schinn: Co-leaders with a focus on first-party data and customer analytics; shape product direction and maintain key client relationships. Actable leadership retains operational control over US clients, hiring, and day-to-day CDP delivery.

PART IV, Integration Model Evaluation

8. Integration Scenarios Definition

8.1 Full Integration

Full integration would see Actable fully absorbed into Ekimetrics' global structure: unified branding, reporting lines, technology stacks, and commercial teams. Actable's Intelligence Factory would be progressively embedded into One.Vision rather than maintained as a standalone product. This model delivers the maximum synergy capture and most directly serves the Elevate 2028 platform target but carries the highest execution risk: it disrupts Actable's active CPG CDP rollout, creates material talent attrition risk for Matt Geitzer and the founding team, and requires significant engineering effort to integrate the two platforms. Timeline: 18 to 36 months to full operational consolidation.

8.2 Hybrid Model

The Hybrid Model preserves Actable's brand and US operational structure while progressively aligning on commercial strategy, technology roadmap, and governance. GTM teams collaborate on joint accounts and cross-sell pipelines; technology integration proceeds in phases, data harmonization first, then platform convergence. This is our recommended model: it protects Actable's existing client relationships in CPG, retail, and financial services, mitigates talent attrition risk, and remains fully compatible with the Elevate 2028 horizon. Timeline: 12 to 18 months to stabilize hybrid governance, with cross-sell synergies materializing progressively over 2 to 3 years.

8.3 Autonomous Subsidiary

An autonomous subsidiary model would see Actable operate as a standalone entity under Ekimetrics' financial ownership, with Ekimetrics exercising governance through board-level oversight only. This minimizes integration risk and preserves Actable's culture entirely but delivers no operational synergy. Cross-sell does not occur organically, the Intelligence Factory does not get embedded into One.Vision, and the model is structurally incompatible with the Elevate plan's stated objectives. It is not aligned with the ambitions expressed by either organization's leadership post-acquisition.

9. Comparative Assessment & Recommendation

This section compares the three integration scenarios across four dimensions: synergy capture potential, governance and cultural impact, risk-reward trade-off, and strategic alignment with Ekimetrics' Elevate

2028 plan. It concludes with a recommended model and a phased transition plan. The target is explicit: a unified MMM + CDP platform combining One.Vision and the Intelligence Factory, delivered via a Structured Hybrid integration model.

9.1 Synergy Capture Potential

Ekimetrics' stated rationale for acquiring Actable is explicit: to build an integrated data and AI value chain combining its MMM leadership, recognized as a Leader in the Forrester Wave Q1 2026 and Visionary in the Gartner Magic Quadrant 2025, with Actable's customer-level analytics. This integration is only fully achieved under a Full Integration or, partially, under a Hybrid Model.

Full Integration: enables the highest synergy capture. Ekimetrics' MMM platform (One.Vision) and Actable's Intelligence Factory (Customer101, CLV, churn, propensity models) become a unified product. Cross-sell to existing Ekimetrics clients in CPG, Retail, Luxury, and Beauty is structurally enabled. The combined Databricks and Google Cloud partnerships reinforce joint go-to-market credibility with US enterprise accounts.

Hybrid Model: captures commercial synergies more quickly through joint GTM, while deferring technology convergence to a later phase. This is commercially sufficient in the near term: the two client bases have no direct overlap, creating immediate cross-sell opportunity without cannibalization risk.

Autonomous Subsidiary: delivers no operational synergy. It is structurally incompatible with the Elevate plan's objective of embedding Actable's technology into the Ekimetrics platform.

9.2 Governance & Cultural Impact

The governance implications of each scenario diverge sharply when assessed against the specific organizational profiles of both entities. Ekimetrics operates under a supervisory board structure, recently reinforced by the appointment of Eric Labaye as Chairman, with Jean-Baptiste Bouzige as President and founder. Actable is founder-led, with Matt Geitzer (CEO), Craig Schinn (COO), and Craig Howard (Solutions) holding both operational and client-facing authority. This leadership structure is not incidental: Actable's client relationships in CPG, DTC, and financial services are built around these individuals.

Full Integration: would require Actable's leadership to report into Ekimetrics' global hierarchy within a defined transition window. Given that Actable was founded in 2019 and operates with a US startup culture centered on speed and MarTech ecosystem integration, this creates a material attrition risk that cannot be offset by title alone. Ekimetrics brings rigor and a structured business-scientist delivery model; Actable brings agility and execution speed rooted in a tech-enabled service culture. Forcing standardization within 18 months risks eroding the very qualities that make Actable strategically valuable.

Hybrid Model: allows for a joint steering committee at CEO level while preserving Actable's internal decision rights on product roadmap and client delivery. This is the governance structure most compatible with retaining the founding team through the Elevate 2028 horizon. It avoids the two failure modes: too much control, which damages Actable's entrepreneurial strengths, and too little control, which leaves the two businesses operating in parallel without strategic coherence.

Autonomous Subsidiary: eliminates cultural risk entirely but also eliminates governance leverage. Ekimetrics cannot direct Actable's product roadmap or commercial strategy, which undermines the integration's strategic purpose and defers all cultural alignment to an undefined future point.

9.3 Risk-Reward Trade-Off

The three scenarios present a clear spectrum: Full Integration carries the highest execution risk but the highest strategic upside; Autonomous Subsidiary is the lowest-risk option but delivers negligible strategic value; the Hybrid Model occupies a defensible middle ground.

Dimension	Full Integration	Hybrid Model	Autonomous Subsidiary
Synergy Capture	●●●●● <i>Full MMM+CDP convergence, unified GTM</i>	●●●○○ <i>Progressive cross-sell, partial tech convergence</i>	●○○○○ <i>No operational synergy, financial holding only</i>
Governance Clarity	●●●●● <i>Single reporting structure, clear decision rights</i>	●●●○○ <i>Dual governance, coordination overhead</i>	●●●●○ <i>Actable self-governed, board oversight only</i>
Cultural Risk	●●○○○ <i>High friction: EU consulting vs. US tech-enabled model</i>	●●●●○ <i>Phased alignment, identity preserved short-term</i>	●●●●● <i>No cultural imposition, full autonomy</i>
Talent Retention	●●○○○ <i>Risk of attrition among Actable founders & engineers</i>	●●●●○ <i>Brand and team continuity maintained</i>	●●●●● <i>Zero disruption to Actable team structure</i>
Client Continuity	●●○○○ <i>Disruption risk to active engagements (CPG, DTC)</i>	●●●●○ <i>Actable brand maintained for existing clients</i>	●●●●● <i>No change in client-facing delivery</i>
Elevate 2028 Fit	●●●●● <i>Directly enables platform integration target</i>	●●●●○ <i>Compatible if phased integration is well-governed</i>	●○○○○ <i>Not aligned with Elevate objectives</i>
Speed to Value	●●●○○ <i>High upfront cost, strong payoff post-integration</i>	●●●●○ <i>Quicker commercial synergies, slower tech convergence</i>	●●○○○ <i>No near-term value beyond revenue consolidation</i>

9.4 Recommended Model & Transition Plan

Our recommendation is unambiguous: the Structured Hybrid Model, with a clear endpoint of a fully unified MMM + CDP platform by 2028. The Hybrid is not a compromise between integration options; it is

the only model that can deliver the full platform vision without destroying the client relationships and talent base that make the acquisition valuable. This recommendation is grounded in three specific constraints of this deal.

First: Actable's active client base, including a 22-brand CPG CDP rollout and financial services engagements, cannot absorb organizational disruption in the near term. Preserving the Actable brand and delivery team through at least the first 18 months is a client retention imperative.

Second: Actable's Intelligence Factory is built on Databricks and Google Cloud. Integrating it into Ekimetrics' One.Vision platform requires significant engineering effort. Attempting this in parallel with commercial integration and organizational change in Year 1 is an execution risk not justified when cross-sell synergies can be captured first through a joint GTM model.

Third: The Elevate plan's 2028 horizon provides sufficient time for a phased integration. Full platform convergence does not need to occur at close; it needs to occur before the plan's endpoint. A hybrid that transitions to full integration over 36 months is structurally compatible with Ekimetrics' stated objectives.

The Hybrid Model is recommended not as a permanent state, but as a structured transition toward full integration. The key condition for success is that governance clarity and decision rights are defined from Day 1, preventing the dual-structure ambiguity that is the primary failure mode of hybrid integrations.

Transition Plan

Phase	Focus	Key Actions
Phase 1 (M0-M6)	Stabilization	Retain Actable brand for all US client-facing activity. Confirm Matt Geitzer and founding team retention packages. Establish joint steering committee (Ekimetrics CEO + Actable CEO). No platform changes. Protect active client engagements, especially the 22-brand CPG CDP rollout.
Phase 2 (M6-M18)	Commercial Alignment	Launch joint GTM for net-new US enterprise accounts. Define 10-15 priority cross-sell targets from Ekimetrics MMM client base (CPG, Retail, Luxury). Actable consultants trained on Ekimetrics MMM methodology. Begin data harmonization between Intelligence Factory and One.Vision platform.
Phase 3 (M18-M36)	Platform Convergence	Progressive integration of Actable Intelligence Factory (Customer101, predictive models, CLV/churn) into Ekimetrics One.Vision platform. Unified product offer launched to market. Decision on Actable brand: co-brand or full Ekimetrics branding based on client and talent feedback at 18-month review.

Note: The 18-month brand decision is a deliberate checkpoint. If talent retention and client continuity are secured, the case for accelerating toward Full Integration strengthens. If cultural friction persists, the hybrid structure can be extended without strategic loss.

10. Business & Go-to-Market Synergies

The commercial opportunity created by the Ekimetrics-Actable deal is grounded in a fundamental complementarity: Ekimetrics measures the aggregate impact of marketing investment across channels (the macro view), while Actable identifies and activates individual customers most likely to respond (the micro view). No competitor currently offers this combination as a native, integrated product. The long-term commercial objective is a single unified MMM + CDP platform that clients purchase as one product, not two. Section 10 defines how this objective is captured commercially in the near term, before full platform convergence, through a structured cross-selling framework, an account expansion strategy, and a US growth acceleration plan.

10.1 Cross-Selling Framework

Cross-selling between Ekimetrics and Actable is not a speculative opportunity: the two client bases are non-overlapping, which means every Ekimetrics client is a potential new Actable account, and vice versa. The absence of cannibalization risk makes this the most immediate commercial lever available post-acquisition.

TARGET CLIENT PROFILE

Not every Ekimetrics client is an equally strong cross-sell candidate. The highest-priority targets share three characteristics: they operate in sectors where customer-level activation matters (CPG, Retail, Financial Services, DTC), they have an active CRM or customer data infrastructure that Actable's Intelligence Factory can plug into, and they have a US presence or are US-headquartered. Based on Ekimetrics' disclosed client portfolio, which includes major CPG, Luxury, and Retail brands, an estimated 40 to 60 existing accounts qualify under these criteria.

THE CLIENT VALUE PROPOSITION

The core pitch to an Ekimetrics MMM client is straightforward: you already know how much to spend and where to allocate your marketing budget across channels. Now you can know exactly which customers to target with that spend, and predict which ones are about to churn, upgrade, or lapse. Actable's Intelligence Factory adds the individual-level layer that MMM cannot provide by design.

A concrete example: a CPG client running a multi-brand MMM engagement with Ekimetrics learns that digital advertising delivers materially higher ROI than TV for one of its brands. Actable's Customer101

platform then identifies the 15% of that brand's customer base with the highest CLV and lowest retention probability. The combined output is a media allocation decision informed by both portfolio-level ROI and individual-level customer risk, something neither platform delivers alone.

10.2 Account Expansion

Beyond cross-selling into existing Ekimetrics accounts, the combined entity creates conditions for deeper account expansion: growing the scope and value of engagements with clients who adopt both platforms.

EXPANSION LOGIC

Clients who use both MMM and CDP capabilities tend to deepen their analytical maturity over time. An initial Ekimetrics MMM engagement typically starts at the portfolio or brand level. Adding Actable's Intelligence Factory creates a feedback loop: activation results from Actable's platform inform the next MMM measurement cycle, which in turn improves budget allocation, which improves the activation pool. This flywheel effect increases client dependency on both platforms and creates natural upsell opportunities.

Expansion from MMM to full analytics stack: Ekimetrics clients who add Actable capabilities expand their engagement from a single-platform measurement contract to a measurement-plus-activation stack. This typically increases total contract value by 60 to 100%, based on comparable analytics platform expansion patterns observed in deals such as Salesforce's acquisition of Tableau and Adobe's acquisition of Marketo.

Expansion from CDP to MMM: Actable clients in CPG and DTC who run customer analytics without budget-level measurement are natural MMM candidates. Actable's Intelligence Factory identifies which customer segments are growing or declining; Ekimetrics' MMM explains why, by connecting media investment to those outcomes. This combination is particularly compelling for DTC brands scaling their media spend beyond direct response channels.

10.3 US Growth Acceleration

Ekimetrics' US branch was already in strong growth trajectory prior to the Actable acquisition, making this deal a geographic pivot rather than a market entry. The acquisition accelerates US growth through three mechanisms: it adds Actable's existing US client base and team, it creates a differentiated product position that no US-headquartered competitor currently replicates, and it reinforces Ekimetrics' partnerships with Databricks and Google Cloud, which are dominant infrastructure providers in the US enterprise analytics market.

COMPETITIVE POSITIONING IN THE US

The US marketing analytics market is served by a fragmented set of players: pure-play MMM vendors (Analytic Partners, Nielsen), pure-play CDP vendors (Segment, mParticle, Treasure Data), and large platform players (Adobe, Salesforce) with broad but shallow analytics capabilities. None of these players

natively combines portfolio-level MMM with individual-level CDP activation. The Ekimetrics-Actable combination occupies this gap and can position as the only integrated measurement-to-activation analytics partner for enterprise marketing organizations.

Forrester and Gartner recognition: Ekimetrics' Q1 2026 Forrester Wave Leader status and Gartner Magic Quadrant Visionary positioning provide enterprise sales credibility that Actable, as a 2019-founded startup, does not yet have independently. The combined entity can use Ekimetrics' analyst recognition to open doors in accounts that require vendor validation before engagement.

US GO-TO-MARKET ACCELERATION PLAN

Phase	Focus	Key Actions
Phase 1 (M0-M6)	Quick Wins	Joint pitches to 3-5 Ekimetrics MMM clients in CPG and Retail with active loyalty programs. Actable introduces CLV and churn models as add-on to existing Ekimetrics engagements. No new product needed: Actable's Intelligence Factory is deployed independently alongside Ekimetrics deliverables.
Phase 2 (M6-M18)	Systematic Cross-Sell	Formalize a cross-sell playbook: identify qualifying signals in Ekimetrics client base (budget > \$2M, active CRM, US presence). Actable account executives embedded in Ekimetrics US sales team. Target 10-15 net-new Actable engagements sourced from Ekimetrics relationships. First joint proposals with integrated MMM + CDP narrative.
Phase 3 (M18-M36)	Unified GTM	Full joint go-to-market under a single integrated offer: Ekimetrics One.Vision for macro-level budget allocation, Actable Intelligence Factory for customer-level activation. Unified pricing and packaging. Target Fortune 500 CPG, Retail, and Financial Services accounts in the US.

The commercial synergy opportunity is immediate and does not require platform integration to begin. Cross-selling can start in Phase 1 using the two platforms independently. The integrated product offer in Phase 3 is the long-term value driver, but it is not the prerequisite for near-term revenue growth.

11. Product & Technology Integration Roadmap

The technology integration between Ekimetrics and Actable is the most complex dimension of the deal. Both platforms are purpose-built, production-grade systems with active client commitments: Ekimetrics' One.Vision platform serves hundreds of MMM engagements globally; Actable's Intelligence Factory is deployed in production for clients including the 22-brand CPG CDP rollout. Any integration must be designed to protect client continuity while progressively building toward a unified product.

11.3 Phased Technical Integration Plan

The technical integration between Ekimetrics and Actable should follow a phased roadmap designed to balance operational continuity, risk mitigation, and progressive value creation. Rather than attempting a full system merge from the outset, the integration should evolve across three stages: stabilization, synergy ingestion, and full convergence. This approach ensures that client delivery remains uninterrupted while gradually unlocking data, technology, and commercial synergies.

11.3.1 STAGE 1: OPERATIONAL STABILIZATION (MONTH 0 TO MONTH 3)

Stage 1 focuses on creating a secure, interoperable foundation without operational disruption. Priority actions include aligning cybersecurity standards, establishing secure data connectivity, implementing single sign-on, and introducing a unified data governance framework covering GDPR and US data regulations: including data ownership, access rights, and cross-border transfer protocols. System integration remains minimal and API-based at this stage, allowing basic data exchange without forcing architectural changes. The goal is not to generate immediate synergies, but to build the stable, compliant environment that all subsequent integration phases depend on.

11.3.2 STAGE 2: SYNERGY INGESTION & PILOT DEPLOYMENT (MONTH 3 TO MONTH 9)

Once a stable foundation is established, the integration shifts toward activating synergies through controlled initiatives. Both organizations align on a shared data taxonomy: customer identifiers, media channels, and conversion metrics: and deploy a Data Clean Room to enable privacy-compliant matching between Actable's CDP data and Ekimetrics' MMM media datasets. A limited number of pilot use cases are then launched with selected clients, focusing on budget optimization, campaign adjustment, and integrating customer-level signals into MMM models. This phase transforms the integration from a technical exercise into a proven value proposition, building measurable ROI and client confidence.

11.3.3 STAGE 3: FULL PLATFORM CONVERGENCE (MONTH 9 TO MONTH 24)

Stage 3 scales the integration into a fully unified, productized platform. One.AI is deployed as the central orchestration layer connecting MMM's strategic modeling with Actable's Intelligence Factory execution capabilities, creating a closed-loop intelligence platform that supports continuous performance monitoring, automated model updates, and real-time optimization recommendations. The architecture is standardized for multi-client, multi-market deployment across the US and Europe via modular APIs, reusable data connectors, and industry-specific templates: transforming Ekimetrics from a consulting-led firm into a scalable, technology-driven product company.

11.3.4 STRATEGIC IMPACT

This phased integration roadmap goes beyond combining two technology stacks; it fundamentally redefines how marketing analytics is delivered. By integrating macro-level econometric modeling with micro-level customer data, the combined platform enables a continuous and closed-loop decision system. This allows marketing to evolve from retrospective analysis to predictive insights, and ultimately to automated optimization. As a result, the combined entity is positioned to become a category leader in

next-generation marketing intelligence, particularly in privacy-constrained environments across the US and Europe.

Client continuity takes precedence over integration speed throughout this roadmap. Both platforms must remain fully functional and independently supportable at every stage. A failure in either system during the integration window would damage client trust at precisely the moment the combined entity is building its credibility in the US market.

PART VI, Governance, Culture & Performance Framework

12. Governance & Cultural Integration Framework

The governance and cultural integration of Ekimetrics and Actable is a critical determinant of the Hybrid Model's success. Unlike a full acquisition where organizational homogenization is the end state, the Hybrid Model requires sustained governance discipline: two organizations with different cultures, operating models, and client bases must coordinate effectively without losing the qualities that make each valuable. This section defines the governance principles, decision rights, leadership alignment mechanisms, and integration safeguards that underpin the recommended model.

12.1 Governance Principles

The recommended governance structure is federated. Ekimetrics retains central control over global strategy, brand, enterprise risk, and product direction. Actable preserves local autonomy over US client execution, team management, and day-to-day commercial operations. This structure is not a compromise: it is the deliberate design choice that makes the Hybrid Model viable.

The rationale is grounded in the specific risk profile of this deal. Actable's strategic value lies in its US market credibility, its founder-led client relationships, and its agile delivery model. Over-centralization, defined as imposing Ekimetrics' European consulting governance on Actable's US operations, would erode these qualities. Under-separation, defined as allowing Actable to operate with no strategic alignment to Ekimetrics, would prevent product convergence and cross-sell execution. The federated model is the governance equivalent of the Hybrid integration: structured autonomy with defined alignment points.

12.2 Decision Rights & Reporting Lines

Decision rights must be documented and communicated from Day 1. Ambiguity in the first 12 months is the primary governance failure mode of hybrid integrations: when both organizations believe they own a

decision, execution slows and trust erodes. The decision rights framework defined in Section 12.2 sets ownership across the key decision domains.

Reporting lines follow the same logic. Actable's CEO Matt Geitzer reports directly to Ekimetrics' President Jean-Baptiste Bouzige at the executive level, preserving the strategic relationship without creating an intermediate management layer. Actable's US team reports to Geitzer. Ekimetrics' global product and engineering teams coordinate with Actable's Intelligence Factory team through a joint technical committee, not through a hierarchical reporting structure.

12.3 Leadership Alignment

Leadership alignment is the operational mechanism through which the federated governance structure functions. Ekimetrics and Actable leaders must share priorities, operate with mutual visibility, and have explicit roles in the integration process. The risk of a Hybrid Model is not structural conflict: it is drift, where two organizations gradually diverge in direction and culture because they are not actively aligned.

JOINT STEERING COMMITTEE

A Joint Steering Committee (JSC) is established at close, co-chaired by Jean-Baptiste Bouzige (Ekimetrics President) and Matt Geitzer (Actable CEO). The JSC meets monthly in the first 12 months and quarterly thereafter. Its mandate covers: reviewing integration milestones, resolving cross-organizational escalations, approving joint go-to-market initiatives, and monitoring cultural alignment indicators.

Actable's leadership must remain visibly empowered throughout the integration. The US team's confidence in the deal depends on seeing Geitzer, Craig Schinn, and Craig Howard operating with real authority over their domains. A JSC where Actable's leaders are present but overruled is worse than no JSC: it signals to the team that autonomy was promised but not delivered.

12.4 Twelve-Month Integration Safeguards

The first 12 months are the highest-risk period of the integration. Talent attrition, client churn, and cultural friction are most likely to materialize in this window. The following safeguards are designed to protect the integration's value during this period.

① Retention Packages

Equity-based agreements with 3-year vesting and a 12-month cliff for Geitzer, Schinn, Howard, and the top 10 technical leads. Non-negotiable from Day 1.

② Client Continuity

Named continuity owner for each of Actable's top 10 accounts. No account manager changes in Year 1 without JSC approval.

③ No Rebrand in Year 1

Actable operates under its own brand for all US client-facing activity through at least Month 18. Brand transition only after JSC approval.

④ Attrition Monitoring

HR reports voluntary attrition monthly to the JSC. Above 10% in any single quarter triggers an immediate escalation review.

The four safeguards above are non-negotiable in Year 1. Any deviation — whether on retention packages, account manager changes, brand transition, or attrition thresholds — requires explicit JSC approval. The JSC is the single escalation point for all safeguard exceptions and must log every decision for post-integration review.

13. Performance Monitoring & Value Capture

Measuring the success of the Ekimetrics-Actable integration requires a KPI framework that covers three dimensions: financial and commercial performance, operational and talent health, and integration progress. These are not independent metrics: a deal that generates revenue synergies but loses key talent has not succeeded. A deal that retains talent but fails to convert cross-sell opportunities has not captured its value. The framework below tracks all three dimensions with defined targets and review cadences.

13.1 Financial & Commercial KPIs

Commercial KPIs measure the core value creation thesis: that combining Ekimetrics' MMM client base with Actable's CDP capabilities generates incremental revenue that neither firm could achieve independently. These metrics are tracked at the combined entity level and broken down by geography and product line.

13.2 Operational & Talent KPIs

Operational KPIs monitor the health of the integration process itself: whether the two organizations are converging as planned, and whether the human capital that underpins the deal's value is being retained. These metrics are tracked by the People & Culture workstream and reported to the JSC monthly in Year 1.

Platform & Technical Milestones			
KPI	Definition	Target	Frequency
API Connectivity	Completion of basic API connectors between Intelligence Factory and One.Vision	Live by Month 6	Monthly

Data Taxonomy Alignment	% of shared data definitions agreed and documented across both platforms	>80% by Month 9	Quarterly
Pilot Client Deployments	Number of clients using both platforms in a coordinated engagement	3 pilots live by Month 9	Quarterly
Platform Uptime	Availability of both platforms during integration period	>99.5% for both	Monthly

13.3 Monitoring & Review Mechanisms

KPIs are only useful if they are reviewed with sufficient frequency and at the right level of the organization. The monitoring framework below defines who reviews what, at what cadence, and what triggers escalation.

PART VII, Risk Management & Mitigation

14. Risk Heatmap & Exposure Assessment

This section builds upon the diagnostic findings from Parts II and III to assess residual risks during the integration process using quantitative models. A Vulnerability-Impact Matrix is employed to prioritize risks by their potential exposure to the combined entity's strategic objectives during the 2026 to 2028 integration window.

14.1 In-Depth Assessment of Core Risks

Risk Category	Description	Exposure
Financial & Performance ROI Shortfall	Ekimetrics' publicly committed minimum 10:1 ROI has become a market expectation anchoring its brand positioning in the US enterprise market.	If the technical integration between One.Vision and Intelligence Factory is delayed, a failure in last-mile deployment triggers a chain reaction of client churn. Loss of even one anchor account in Year 1 damages the combined entity's credibility at the moment it needs it most.
Human Capital Scaling Friction	The goal is to expand the US workforce from 75 to 225 employees by 2028, requiring 150 net new hires in 24 months.	60% of transaction value is tied to Actable's existing talent pool. If new hires clash with the existing data scientist culture, operational efficiency declines and the quality of client delivery deteriorates. Cultural dilution risk is highest in Year 2 when hiring volume peaks.
Operational & Legal Regulatory Complexity	The US market requires DMA-level (Designated Market Area) modeling capabilities and is subject to dynamic changes in state privacy laws including CCPA and emerging state-level regulations.	If the technical architecture cannot rapidly adapt to diverse data sovereignty requirements across states, the combined entity faces legal fines, technical debt accumulation, and potential loss of client trust in regulated industries such as financial services.

The three core risks are structurally linked: ROI shortfall (Financial) is partially caused by talent attrition (Human Capital), which is amplified by regulatory complexity (Operational). Mitigating them in isolation is insufficient; the framework in Section 15 addresses their interdependencies.

15. Mitigation & Control Framework

To ensure continued progress toward the Elevate 2028 vision, three lines of defense mitigation framework has been designed. Each line corresponds to a time horizon: short-term stabilization protects existing value, medium-term integration activates synergies under controlled conditions, and early warning monitoring provides dynamic risk oversight throughout the entire window.

15.1 Short-Term Stabilization (Month 0 to Month 6)

KEY TALENT RETENTION

Client relationship continuity: Chris Hildebrand (Global CPG Lead) transitions into managing Actable's existing CPG key accounts, ensuring that the merger does not disrupt the personal relationships that underpin client retention in this segment. Named account ownership is maintained throughout Month 0 to Month 12 with no involuntary reassignments.

15.2 Medium-Term Integration (Month 6 to Month 18)

Led by Doug Jensen (Head of Business Development, US), a structured cross-selling initiative integrates Ekimetrics' MMM capabilities into Actable's beauty and luxury client base. The initiative targets accounts where Actable already has established relationships and where portfolio-level marketing measurement is an identified need. Joint proposals are coordinated through the commercial workstream defined in Section 12.3.

The Data Clean Room (DCR) system is fully deployed by Month 9, treating changes in US state privacy laws as standard product parameters rather than compliance exceptions. This approach transforms regulatory pressure into a competitive advantage: the combined platform's privacy architecture becomes a differentiator versus competitors who treat compliance reactively.

15.3 Early Warning Monitoring Metrics

To dynamically monitor risks, the following Key Risk Indicators (KRIs) have been established. Any threshold breach must be immediately reported to Eric Labaye (Supervisory Board Chair) and Jean-Baptiste Bouzige (CEO) within 24 hours of detection.

The KRI framework is designed to surface problems before they become irreversible. The thresholds are set below the level of material damage: a 12% attrition rate is set as a warning signal: a threshold calibrated to allow remediation

before attrition becomes irreversible, not a figure derived from external benchmarks. A ROI delivery below 8:1 is a trigger for intervention, not a confirmed failure. The purpose of early warning monitoring is to preserve optionality: catching a risk at threshold gives the JSC time to act. Catching it after the fact does not.

PART VIII, Long-Term Strategic Outlook

16. Value Creation Projection

This section projects the long-term value creation potential of the Ekimetrics-Actable combination across three dimensions: revenue growth under different integration scenarios, capability development enabled by the merged platform, and market positioning impact. These projections are grounded in the strategic assumptions and integration milestones defined in Parts IV through VII and should be read as reasoned estimates based on disclosed company data, comparable deal benchmarks, and stated Elevate 2028 objectives, not audited forecasts.

16.1 Revenue Growth Scenario

The Ekimetrics-Actable revenue growth thesis rests on three compounding levers: cross-sell conversion from Ekimetrics' existing MMM client base into Actable CDP engagements, new logo acquisition in the US enterprise market enabled by the combined platform's differentiated positioning, and contract value expansion as clients migrate from single-platform to integrated MMM + CDP engagements. The synergy estimates developed in Part III (\$12M to \$33M cumulative by Year 3) represent the cross-sell contribution only; the scenarios below incorporate all three levers.

Base case rationale (internal estimate based on conversion assumptions, not audited projections): The base case assumes the Hybrid Model operates as designed, with joint GTM live by Month 6, 8 to 10 cross-sell conversions by end of Year 2, and the unified platform launched commercially by Month 24. At a blended revenue growth rate of approximately 22% annually, the combined entity reaches an estimated \$180M to \$220M in revenue by 2028, consistent with the Elevate plan's tripling ambition relative to Ekimetrics' pre-acquisition baseline.

Key sensitivities: The largest single variable is cross-sell conversion rate. A difference of 5 conversions in Year 1 (5 versus 10 accounts) translates to approximately \$2M to \$4M in incremental Actable revenue and signals whether the joint GTM model is functioning. The second key variable is platform convergence timing: a 6-month delay in unified platform launch reduces the contract value expansion opportunity in Year 3 by an estimated \$8M to \$15M. Both variables are tracked in the KRI framework defined in Section 15.3.

16.2 Capability Development

Following the recommendation for a Hybrid Integration Model, the long-term strategic focus is to evolve Ekimetrics into an Autonomous Intelligence Architect: a full-stack platform that bridges macro-strategic planning and micro-tactical execution. The combined entity should be positioned as a Science-First, Execution-Ready growth platform where MMM acts as the Compass setting strategic budget allocation, and the CDP acts as the Engine driving real-time activation. This closed-loop system allows Ekimetrics to capture the entire marketing value chain, moving from retrospective audits to predictive, autonomous optimization.

Three internal capability shifts underpin this positioning. First, institutionalizing Data Clean Room architectures creates a Privacy-by-Design capability that transforms GDPR and CCPA constraints into a competitive Trust Dividend structurally difficult for pure-play vendors to replicate. Second, talent and tooling shift from manual period-based modeling toward automated data pipelines, eliminating the last-mile latency problem endemic to traditional consulting-led MMM delivery. Third, One.AI serves as the central orchestration layer that moves the platform toward productized decision automation, allowing Ekimetrics experts to focus on high-level business transformation while the system autonomously surfaces budget reallocation recommendations, improving operational leverage and enabling global scalability.

16.3 Market Positioning Impact

The acquisition of Actable significantly strengthens Ekimetrics' market position by expanding its role from a measurement-focused analytics firm to a comprehensive marketing partner. Until now, Ekimetrics was primarily recognized for its expertise in marketing mix modeling and strategic budget allocation, providing strong macro-level insights without addressing how decisions are executed at the customer level. Actable fills this gap by adding capabilities in customer analytics, activation, and AI-driven execution: MMM acts as the strategic compass guiding where to invest, while Actable's Intelligence Factory functions as the execution engine translating those decisions into targeted actions.

This connection enables a continuous feedback loop that improves both decision-making and campaign performance over time. As a result, Ekimetrics is no longer positioned solely as an analytics provider, but as an end-to-end partner supporting both strategic planning and operational execution. This shift strengthens its competitive positioning by combining the credibility of a consulting-led approach with the scalability of a technology-enabled platform, a combination no current competitor in the US or European enterprise marketing analytics market replicates at this level of analytical depth.

17. Strategic Outlook & Competitive Positioning

The long-term strategic outlook for the Ekimetrics-Actable combination depends on three interconnected factors: the depth of differentiation achieved in the US market, the strength of the global brand built around the unified platform, and the strategic optionality created by the acquisition for Ekimetrics' next phase of growth. This section assesses each in turn.

17.1 US Differentiation

Ekimetrics' combined positioning with Actable creates a clear point of differentiation in the US market, where competitors typically focus on either strategic consulting or technology-driven execution, but rarely both. Traditional consulting firms provide strong expertise in marketing strategy and budget allocation but lack integrated activation capabilities. Pure technology players offer advanced data platforms and automation but with limited strategic guidance and business context. This structural gap between decision-making and execution is precisely where the combined entity operates.

By linking MMM-driven insights with customer-level activation, the firm offers a complete solution that connects strategy to execution, allowing clients not only to understand where to invest but also to act on those decisions in a measurable and scalable way. In the US market, where demand for measurable ROI and data-driven marketing is particularly strong, this integrated approach provides a meaningful competitive advantage, positioning Ekimetrics as a hybrid tech-plus-services player capable of delivering both strategic insight and operational impact in a single engagement.

17.2 Global Brand Reinforcement

The Ekimetrics-Actable deal is a global brand reinforcement event as much as a US growth story. Ekimetrics' Forrester Wave Leader recognition in Q1 2026 and Gartner Magic Quadrant Visionary status in 2025 established its analytical credibility with enterprise buyers globally. The acquisition adds a new dimension to that credibility: it signals to the market that Ekimetrics is not only a measurement leader but an activation-capable partner, able to accompany clients from strategic budget decisions to operational marketing execution. The combined entity should target Forrester and Gartner recognition in the CDP and marketing analytics convergence category by 2027, anchored by a well-documented joint client case study spanning both platforms.

Actable's Intelligence Factory capabilities, currently deployed primarily in the US, have direct applicability to Ekimetrics' European client base. CPG, Retail, and Financial Services clients in France, the UK, and Germany face the same macro-to-micro measurement gap that the combined platform addresses. The Munich office, Actable's only European presence, provides the foothold for this expansion. Introducing Intelligence Factory deployments for 3 to 5 existing Ekimetrics European clients by Year 3 would both generate incremental revenue and reinforce the global brand narrative around the unified platform.

17.3 Strategic Optionality

Beyond the immediate value creation thesis, the acquisition opens three strategic options. Platform licensing as a SaaS product would allow the combined entity to address mid-market clients at a lower price point, significantly expanding the total addressable market without proportional headcount growth. Further M&A in adjacent capabilities: media buying optimization, retail media analytics, or AI-driven creative optimization: would extend the platform’s coverage of the marketing value chain. Third, a combined entity in the \$180M to \$250M revenue range: the approximate threshold at which comparable European B2B analytics firms have pursued public listings: would meet the profile of a credible IPO candidate by 2028 to 2030.

All three options are only preserved if the integration succeeds: platform licensing requires a unified product, further M&A requires a strong balance sheet, and IPO readiness requires clean financials and a defensible market position. The critical success factors are well-defined: retaining the Actable founding team through equity-based packages, maintaining client continuity in Year 1, and executing the phased technology roadmap without disrupting active CDP deployments. If these milestones are met, the Ekimetrics-Actable combination will emerge from the Elevate 2028 horizon as the only integrated measurement-to-activation partner in enterprise marketing at global scale: a category-defining position that neither firm could have reached independently.

APPENDICES

Appendix A : Stakeholder Mapping

This table maps the key internal and external stakeholders of the Ekimetrics-Actable integration, their level of influence, their stance toward the deal, and their primary concerns. Stance categories: Champion (actively supports integration), Supportive (broadly positive), Conditional (supportive under specific conditions), Watchful (monitoring outcomes), At-risk (potential source of attrition or disruption).

This appendix maps the key stakeholders of the Ekimetrics-Actable integration across four groups, defined by category, influence, and interest level. The overview below summarizes each group; the detailed table provides individual-level mapping.

Appendix B : Integration Scenario Matrix

This matrix provides a structured comparison of the three integration archetypes evaluated in Section 8 across eleven strategic dimensions. The Hybrid Model is the recommended scenario, highlighted in green in the final row. Revenue impact figures are reasoned estimates based on stated assumptions and comparable deal benchmarks, not audited projections.

Integration Scenario Comparison

Appendix C : Hybrid Integration Benchmark

This appendix benchmarks the Ekimetrics-Actable integration against two comparable tech acquisitions that followed a hybrid integration model: Salesforce's acquisition of Tableau (2019) and Adobe's acquisition of Marketo (2018). Both deals share structural similarities with the Ekimetrics-Actable deal: complementary capabilities, non-overlapping or partially overlapping client bases, and a phased convergence strategy. The comparison is based on publicly available sources including Salesforce and Adobe investor relations filings, earnings call disclosures, and reported financial results.

Dimension	Salesforce × Tableau (2019)	Adobe × Marketo (2018)	Ekimetrics × Actable (2026)
Deal Size	\$15.7 billion	\$4.75 billion	Undisclosed
Strategic Logic	CRM + Analytics: connect customer records to business intelligence	Content & analytics (macro) + B2B marketing automation (activation): connect strategy to engagement	MMM (macro budget allocation) + CDP (micro customer activation): connect measurement to execution
Integration Model	Hybrid: Tableau retained brand, team, and CEO Adam Selipsky post-acquisition	Hybrid: Marketo retained brand; CEO Steve Lucas continued to lead the Marketo team inside Adobe	Hybrid (recommended): Actable retains US brand and operations; Matt Geitzer continues as CEO
Client Base Overlap	Non-overlapping at close; cross-sell into existing Salesforce accounts	Partial overlap; joint customers explicitly requested integration (confirmed by Adobe CEO at announcement)	Non-overlapping at close; 40–60 Ekimetrics accounts qualify for Actable cross-sell
Cross-Sell Before Convergence	Yes: Tableau featured in 8 of Salesforce's top 10 client deals within one year of close, before full platform integration	Yes: Marketo immediately positioned as complement to Adobe Experience Cloud for joint clients	Planned: joint GTM from Month 6, 10–15 cross-sell targets by Month 18
Revenue Outcome	Tableau revenue more than doubled since acquisition; 16% YoY growth by 2024. MuleSoft + Tableau ~\$5.8B annually	Adobe Digital Experience (including Marketo): \$614M/quarter with 21% YoY growth at time of deal	Base case: \$180M–\$220M combined revenue by 2028 (~22% CAGR); internal estimate, not audited
Key Risk Realized	Revenue growth slowed to near 0% in Year 1 post-close before recovering strongly	Product integration complexity; some tools saw reduced development support post-close	Talent attrition (R1) and tech integration latency (R4) are primary monitored risks
Lesson for Ekimetrics	Cross-sell value is captured before platform convergence. Protect acquired brand and team in Year 1.	Retain acquired CEO and leadership team. Define integration priorities clearly to avoid product neglect.	Geitzer retention + RACI from Day 1 + phased tech roadmap directly addresses both lessons

Sources

Salesforce completes acquisition of Tableau: Salesforce Investor Relations, August 2019 (investor.salesforce.com) – Salesforce discloses Tableau results for first time since \$15.7B deal: GeekWire, May 2021 – Can Seattle startup Tableau flourish under Salesforce?: The Seattle Times, February 2024 – Best Software Acquisition of All Time Was Salesforce Buying Tableau: Cloud Wars, September 2020 – Adobe confirms it's buying Marketo for \$4.75 billion: CNBC, September 2018 – Adobe completes acquisition of Marketo: Adobe / SEC Form 8-K filing, October 2018 – Adobe to acquire Marketo: Adobe press release, September 2018 (adobe.com)

Both benchmarks confirm three principles that underpin the Ekimetrics-Actable integration recommendation: cross-sell value is captured before full platform convergence; retaining the acquired CEO and leadership team in Year 1 is a critical success factor; and a temporary slowdown in the acquired entity's growth post-close is a known risk that requires active monitoring, not a reason to accelerate forced integration.
