Running

Working at the intersection of ML systems, regulatory compliance, and institutional analysis. Currently examining how AI auditing frameworks are shaped by the political and commercial environments they operate in.

EXPERIENCE

Trust & Safety and Legal Compliance Intern

SHEIN (Infinite Styles Ecommerce France SARL) · Paris · Jun 2026 – Sep 2026

- Supporting DSA Trust & Safety compliance for a designated Very Large Online Platform (VLOP), subject to the most stringent tier of EU regulatory obligations
- Working across legal and technical teams to translate regulatory requirements into operational and system-level decisions
- Examining how platform governance structures respond to Trust & Safety obligations under the Digital Services Act

Technology & Data Integration Lead

Ekimetrics (In-company project) · Paris · Jan 2026 – Jun 2026

- Contributed to post-merger technology integration framework for Ekimetrics' US market acquisition (Actable)
- Mapped interoperability constraints between MMM, CDP, and AI systems across US and EU jurisdictions under GDPR constraints
- Proposed a Data Clean Room architecture to address purpose-limitation constraints in cross-entity data usage
- Helped structure a convergence monitoring framework spanning technical milestones, talent health, and commercial KPIs

Research Assistant

French National Centre for Scientific Research (CNRS) · Paris · Jul 2023 – Sep 2023

- Conducted data-driven analysis of linguistic patterns using R and statistical methods
- Contributed to research on Specific Language Impairment (SLI) diagnosis in children and gender bias in French press

EDUCATION

MSc Data Science & AI Strategy

emlyon Business School · Paris · Jun 2025 – Present

Exchange semester · TU Berlin · Mar – May 2026

BA Foreign Languages & Literature

Tunghai University · Taichung, Taiwan · Sep 2021 – Jun 2025

GPA 4.16 / 4.3

RESEARCH

MSc Thesis (in progress) — Expected completion mid 2027

Structured Epistemic Dependence in AI Auditing Frameworks

Examines how the evaluation frameworks ML auditing relies on: labeling guidelines, performance metrics, and compliance thresholds, are institutionally constructed within the same political and commercial environments as the systems they assess. Argues that this creates a form of structured epistemic dependence in which auditing stabilizes rather than independently verifies.
